

## ADRA2A

**Reactivity:** Human Mouse

**Tested applications:** WB

**Recommended Dilution:** WB 1:500 - 1:2000

**Calculated MW:** 49kDa

**Observed MW:** Refer to figures

**Immunogen:**

Recombinant protein of human ADRA2A

**Storage Buffer:**

Store at -20. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

**Synonym:**

ADRA2; ADRAR; ZNF32; ADRA2R; ALPHA2AAR;

**Catalog #:** A2809

**Antibody Type:**

Polyclonal Antibody

**Species:** Rabbit

**Gene ID:** 150

**Isotype:** IgG

**Swiss Prot:** P08913

**Purity:** Affinity purification

For research use only.

**Background:**

Alpha-2-adrenergic receptors are members of the G protein-coupled receptor superfamily. They include 3 highly homologous subtypes: alpha2A, alpha2B, and alpha2C. These receptors have a critical role in regulating neurotransmitter release from sympathetic nerves and from adrenergic neurons in the central nervous system. Studies in mouse revealed that both the alpha2A and alpha2C subtypes were required for normal presynaptic control of transmitter release from sympathetic nerves in the heart and from central noradrenergic neurons; the alpha2A subtype inhibited transmitter release at high stimulation frequencies, whereas the alpha2C subtype modulated neurotransmission at lower levels of nerve activity. This gene encodes alpha2A subtype and it contains no introns in either its coding or untranslated sequences.
