

TES Human

Description: TES Recombinant Human produced in E.Coli is a single, non-glycosylated polypeptide chain containing 441 amino acids (1-421 a.a.) and having a molecular mass of 50.1 kDa. The TES protein is fused to 20 amino acid His-Tag at N-terminus and purified by proprietary chromatographic techniques.

Introduction:

TES also called Testin is a tumor suppressor protein which is involved in cell adhesion, cell spreading and in the restructuring of the actin cytoskeleton. TES protein localizes to cell-cell contacts and actin stress fibres, and interacts with a diversity of cytoskeletal proteins such as Zyxin, Mena, VASP, Talin and Actin. The ability of TES to associate with alpha-actinin, paxillin and Zyxin is dependent on the conformational form of the protein.
